

Business line and technology data roles

DATA GOVERNANCE CONCEPTS

Courtney Smith
Strategic Initiatives Manager

A food analogy

Food supply chain

Data lifecycle

Data owners

Farm owner (grow)

- Sufficient land
- Quality soil
- Responsible workers
- Standard processes
- Regulatory compliance

Data owner (create)

- Proper infrastructure
- Governance
- Assigned resources
- Standard practices
- Regulatory compliance

Data producers

Farmworker (grow)

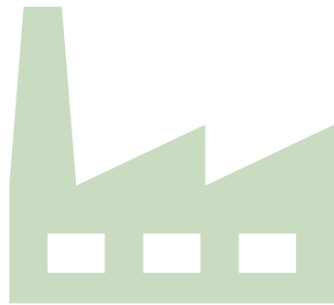

- Planting
- Harvesting
- Food inspection
- Problem resolution

Data producer (create)

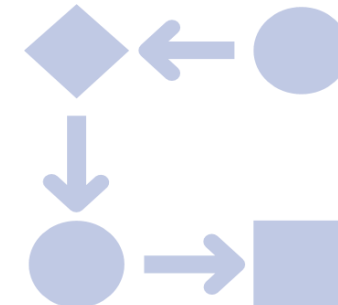

- Creating / entering
- Quality checks
- Issue investigation
- Issue resolution

Data engineers

Food process engineer (process)

- Build systems to convert raw food into marketable products
- Optimize quality, storage, distribution
- Automate processing and packaging

Data engineer (process)

- Build data pipelines to convert raw data into useful information
- Optimize quality, storage, distribution
- Automate data processing

Data custodians

Farm distributor (distribute)

- Food storage
- Food transportation
- Smooth delivery
- Damage prevention

Data custodian (store)

- Data storage
- Data delivery
- System security
- Data integrity controls
- Server, backup, network management

Data stewards

Grocery store manager (sell)

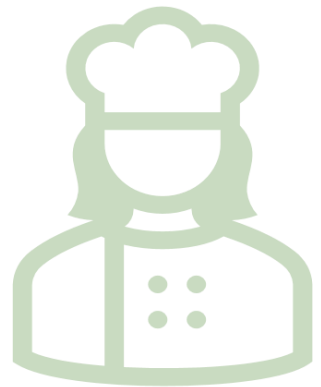

- Ensures products meet standards
- Organizes product displays to optimize profits
- Guides / helps customers

Data steward (manage)

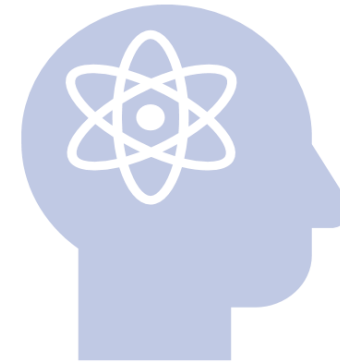

- Standardizes data and definitions
- Classifies and organizes
- Manages access and protection
- Guides consumers

Data analysts and scientists

Chefs (use)

- Fulfill customer order
- Collect ingredients
- Inspect, clean, process
- Create basic to gourmet meal

Data analysts / scientists (use)

- Business solutions
- Collect data
- Review, cleanse, process
- Reports / dashboards
- Actionable insights

DATA GOVERNANCE CONCEPTS

Roles in the data governance office

DATA GOVERNANCE CONCEPTS

Courtney Smith
Strategic Initiatives Manager

Establishing a data governance office

Chief data officer

Data governance lead

Data governance consultant

Data quality analyst

Chief data officer

Responsibilities:

- Develops and executes a data strategy that uses data to drive business value
- Creates and promotes a data-driven culture
- Oversees data governance, data management, and data analytics and supports data operations
- Able to drive change and influence others
- Understands business line needs and technical capabilities

Data governance lead

Responsibilities:

- Define and communicate policies, standards, and framework
- Manages the data governance team
- Guides business lines in the implementation of data governance processes

Data governance consultant

Responsibilities:

- Subject matter expert in data governance
- Provides guidance to business lines
- Facilitates data governance implementation
- Liaison between business and technology
- Translates business requirements to technical specifications

Data quality analyst

Responsibilities:

- Data profiling and statistical analysis
- Data quality rules writing and implementation
- Root cause investigation
- Issue remediation assistance

Data architect

Responsibilities:

- Creates a blueprint for building an integrated, secure data framework
- Manages end-to-end data architecture
- Defines and manages end-to-end architecture and data flow
- May sit within DGO or technology

DATA GOVERNANCE CONCEPTS

Data governance sponsorship and committees

DATA GOVERNANCE CONCEPTS

Courtney Smith
Strategic Initiatives Manager

Data governance sponsor

Responsibilities:

- Champions program and promotes buy-in
- Clarifies priorities; ensures alignment
- Helps secure resourcing and resolve issues

Key Characteristics:

- Business executive
- Trusted, respected leader
- Diverse network

What is a data governance committee?

Responsible for:

- Decision-making
- Program oversight
- Issue awareness
- Escalation handling
- Data governance facilitation

When to establish a data governance committee

To start an initiative:

- Committee designs and implements framework
- Transitions later to providing oversight

Post framework implementation:

- Framework is already designed and implemented
- Committee provides oversight right away

Data governance committee members

- Executive leaders
- Data governance sponsor
- Chief data officer
- IT representatives
- Subject matter experts
- Impacted stakeholders

Data governance committee topics

Quarterly review of:

- Strategy effectiveness and alignment
- Return on investment
- Business unit compliance with policies and standards

Monthly review of:

- Data quality improvement
- Change management and communication needs

DATA GOVERNANCE CONCEPTS

Data governance operating models

DATA GOVERNANCE CONCEPTS

Courtney Smith
Strategic Initiatives Manager

What is a data governance operating model?

How an organization operates around its data

- Guidelines for interactions between roles
 - Decision-making responsibility
 - Program direction
 - Policy enforcement
 - Business unit oversight

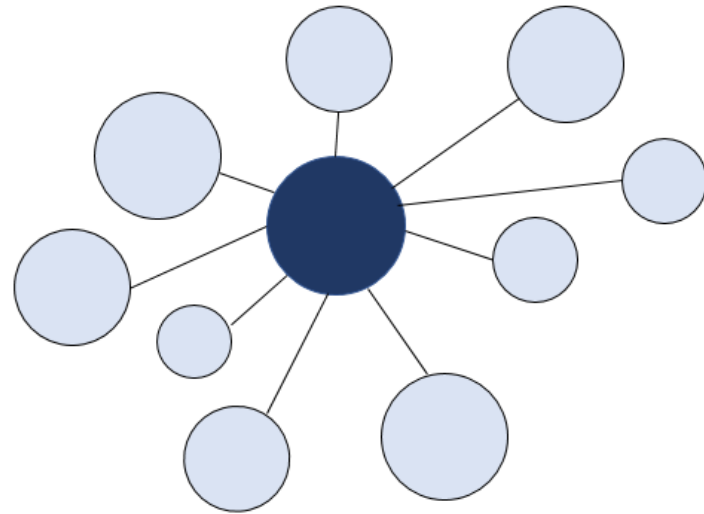

Benefits of operating models

- Operating models provide:
 - Clear governance structure
 - Defined roles, responsibilities, processes
- Leads to:
 - Improved communication
 - Better teamwork
 - Increased ownership and accountability
 - More efficient workflows and processes
 - Better chances of success!

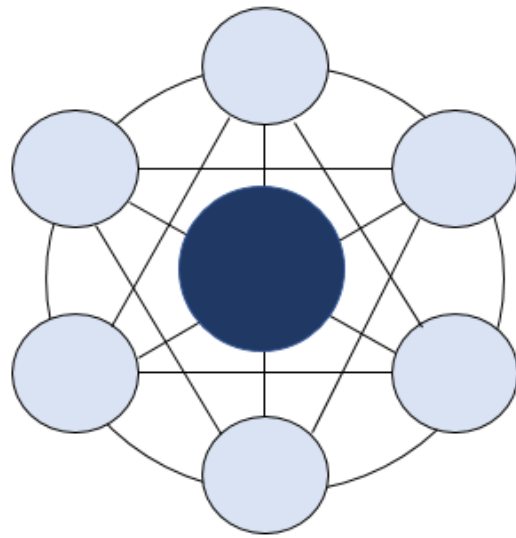

Operating model types

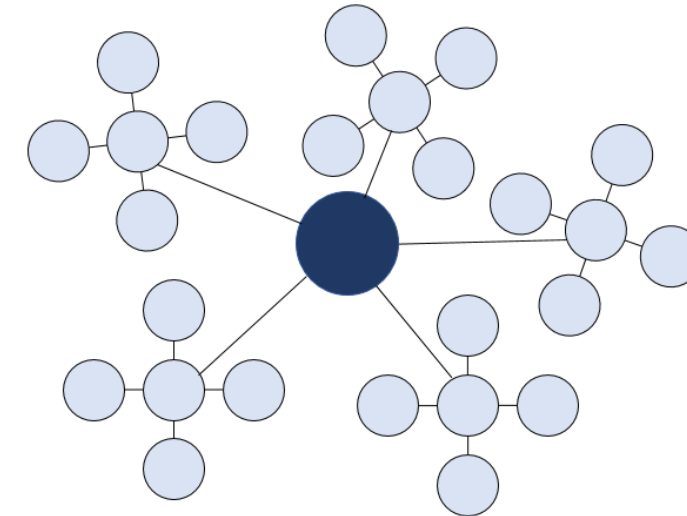

Centralized

Federated

Decentralized

Centralized operating model

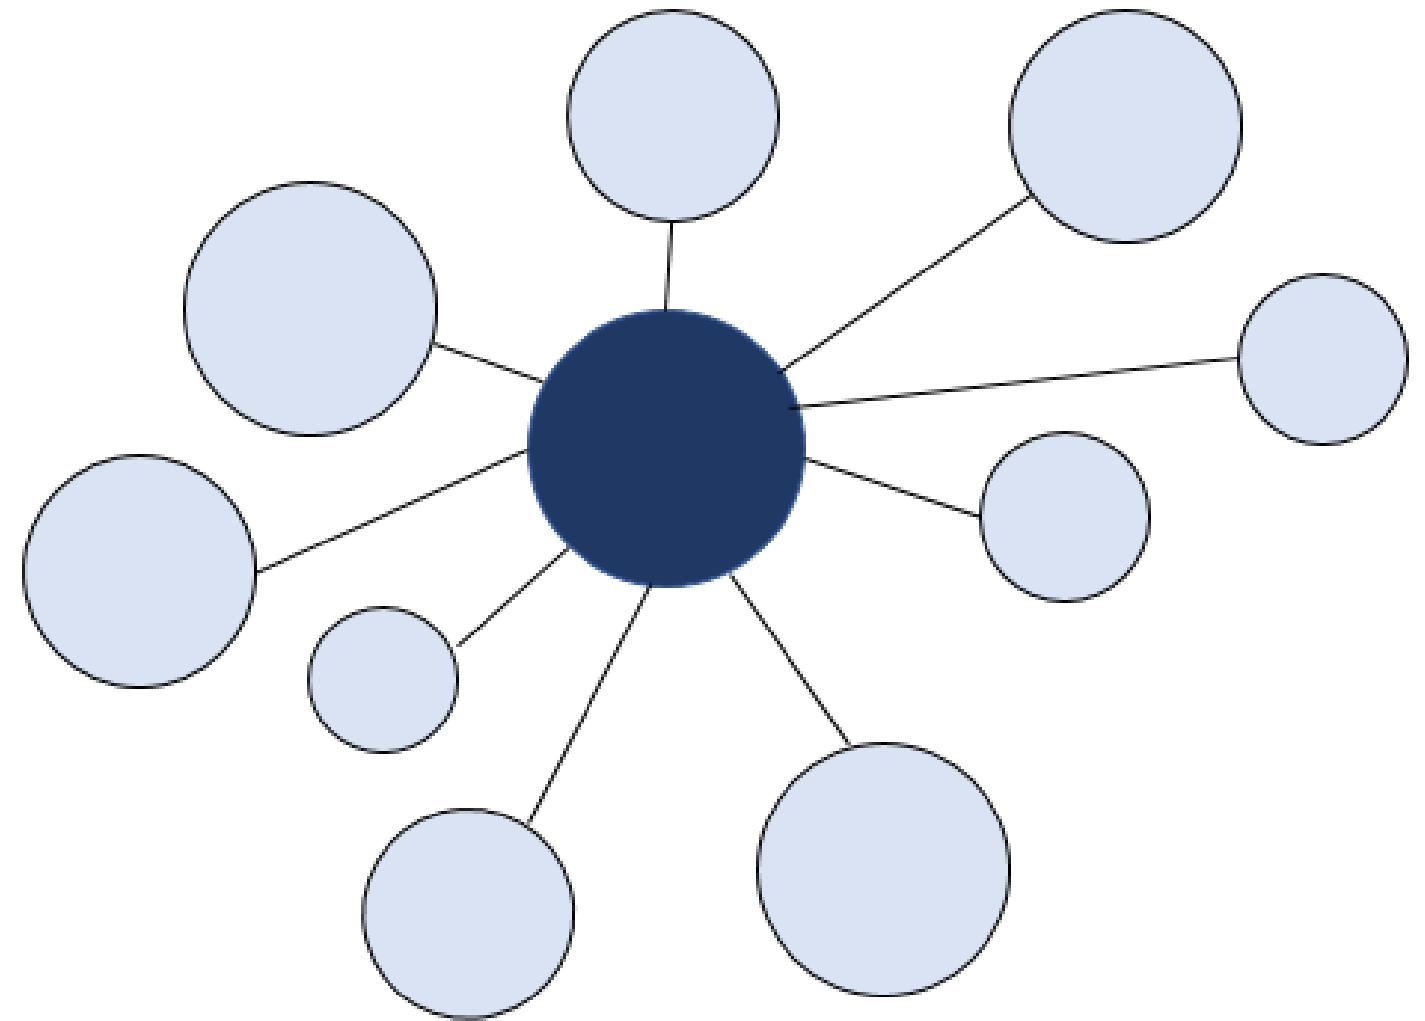

- DGO defines and enforces the framework

Benefits:

- Single enforcement authority
- Clear focus on policies and standards
- More efficient decision-making
- Best for organizations with low data management maturity

Challenges:

- May become too bureaucratic
- Enterprise over business-specific focus

Decentralized operating model

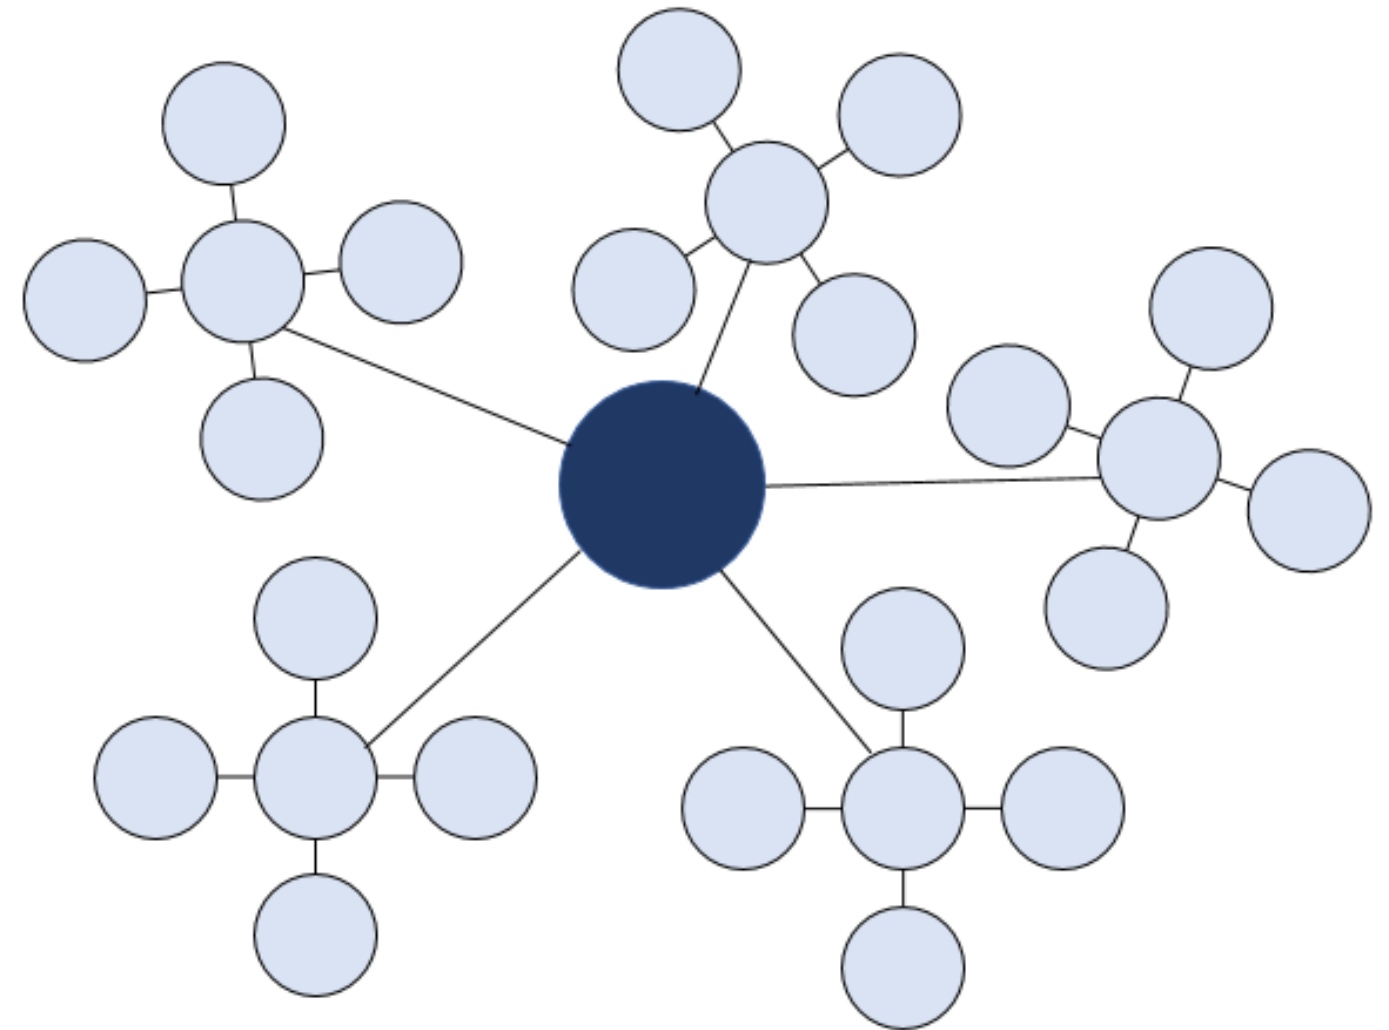

- Data Governance Committee drives decisions

Benefits:

- Easy to establish
- Representation across business lines
- Provides businesses with autonomy

Challenges:

- Takes longer to reach decisions
- Coordination and resource participation can be challenging

Federated operating model

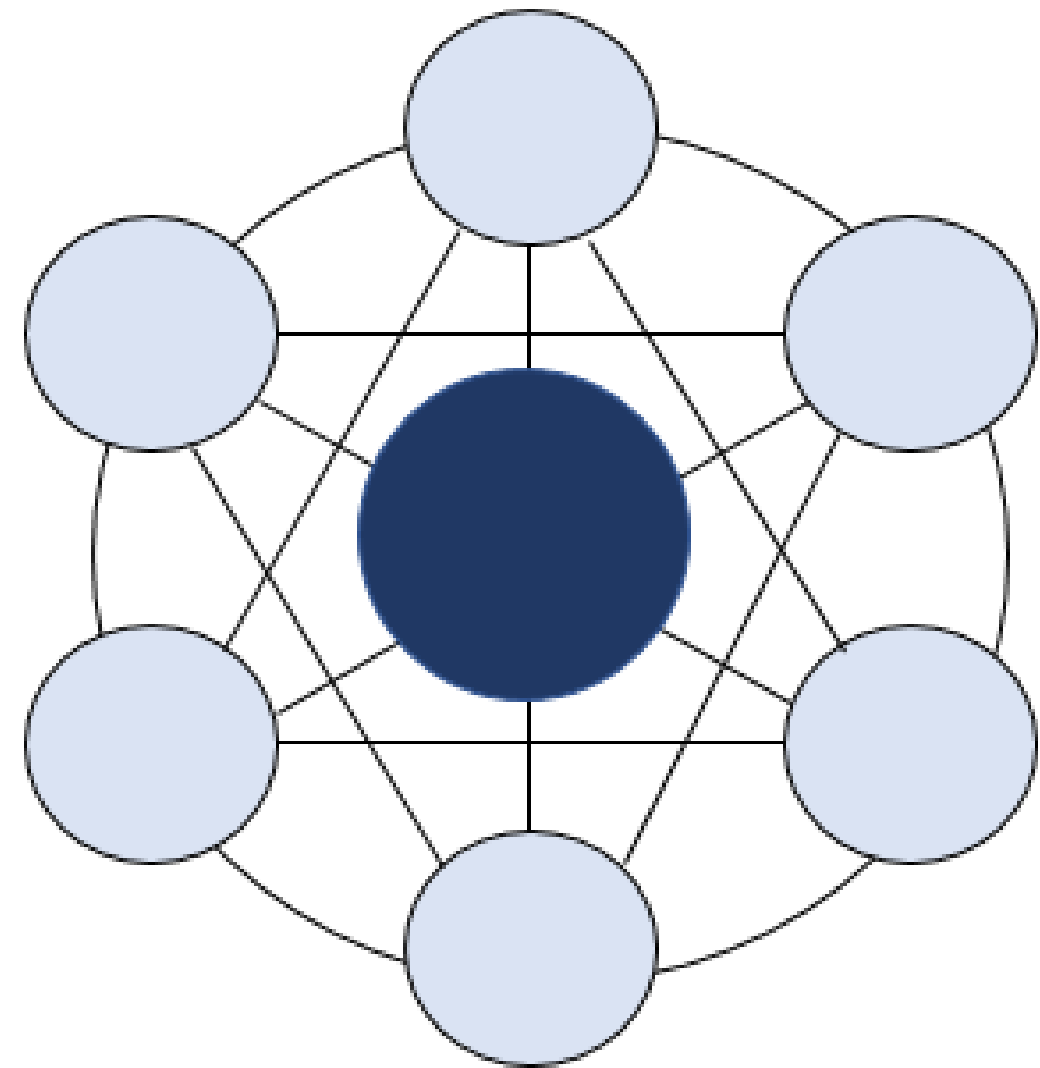

DGO provides centralized capabilities for businesses to leverage based on their needs

Benefits:

- Centralized strategy, policies, tools
- More flexible / Adaptable
- Enterprise and Business level focus

Challenges:

- Requires high data management maturity
- Must have skilled, influential leaders and data expertise across businesses

Adjusting your operating model

1. Select the best model that fits the needs of your organization
2. Periodically evaluate effectiveness
3. Adjust your operating model accordingly
4. Assess data management maturity
5. Identify material changes in company size
