

# Assess the current state

DATA GOVERNANCE CONCEPTS

**Courtney Smith**  
Strategic Initiatives Manager

# Assessment steps

Identify data  
sources and  
stakeholders

Interview  
stakeholders

Evaluate  
current  
capabilities

Document  
current and  
target states

Analyze and  
prioritize

# Identify data sources and stakeholders

We ask:

Where is data sourced from?

Who owns the data?

Who uses the data?

To find out:

- Names and locations of source systems
- Responsible parties for data
- Data stakeholders

What we discover:

- 10 source systems operated by 5 departments (data silos)
- Confusion
- Marketing, finance, human resources, and compliance employees

# Interview stakeholders

We ask:

How do you know your data is of high quality?

How is data protected from misuse and loss?

What types of concerns do you have regarding data?

To find out:

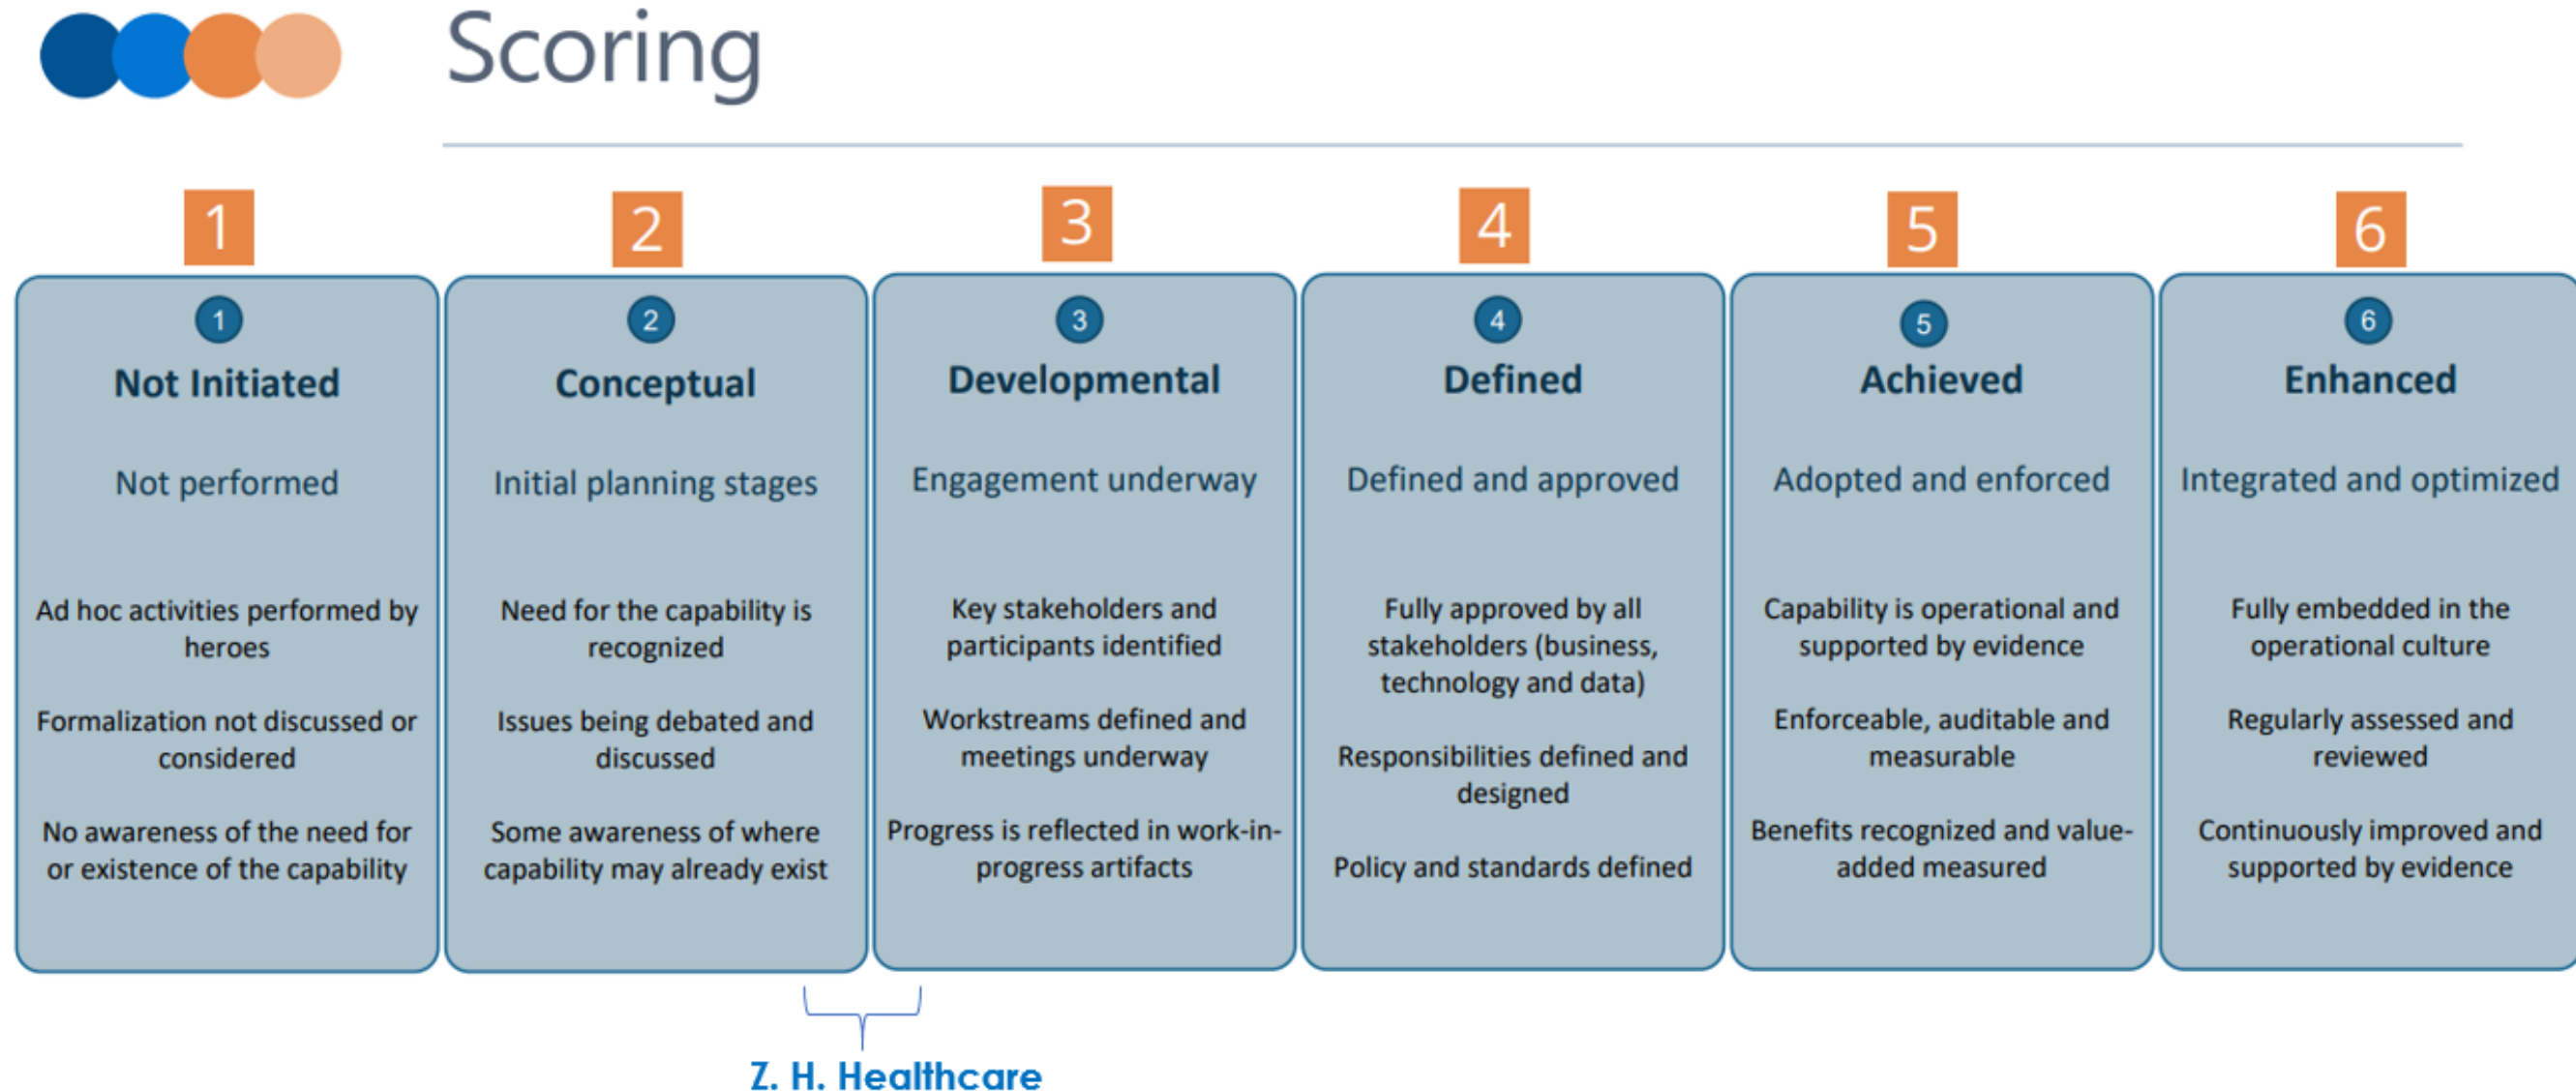

- If stakeholders are missing quality assurance
- If there is a need for better data safety and protection features
- Data stakeholder needs and priorities

What we discover:

- Lack of data-driven decision-making and lack of formal data quality processes
- Disaster recovery and access controls in place
- The need for tools that can help the company manage and classify metadata

# Evaluate current capabilities

## DCAM Rating Scale

<sup>1</sup> edmcouncil.org, 2021

# Document current and target states

## Current state

### Data quality management

- No monitoring processes
- No reporting

### Metadata management

- No technical solution
- Causing data privacy concerns

### Access protection

- Access based on employee department

## Target state in 3 years

### Data quality management

- Daily data quality rule monitoring
- Monthly data health check reports

### Metadata management

- Integrated technical solution
- Compliant with data privacy regulations

### Access protection

- Individual based levels of access
- Automated recertification processes

# Analyze and prioritize

1. Perform gap analysis
2. Prioritize gaps to address
3. Share recommendation with stakeholders
4. Incorporate feedback
5. Issue final report

**Let's practice!**  
**DATA GOVERNANCE CONCEPTS**

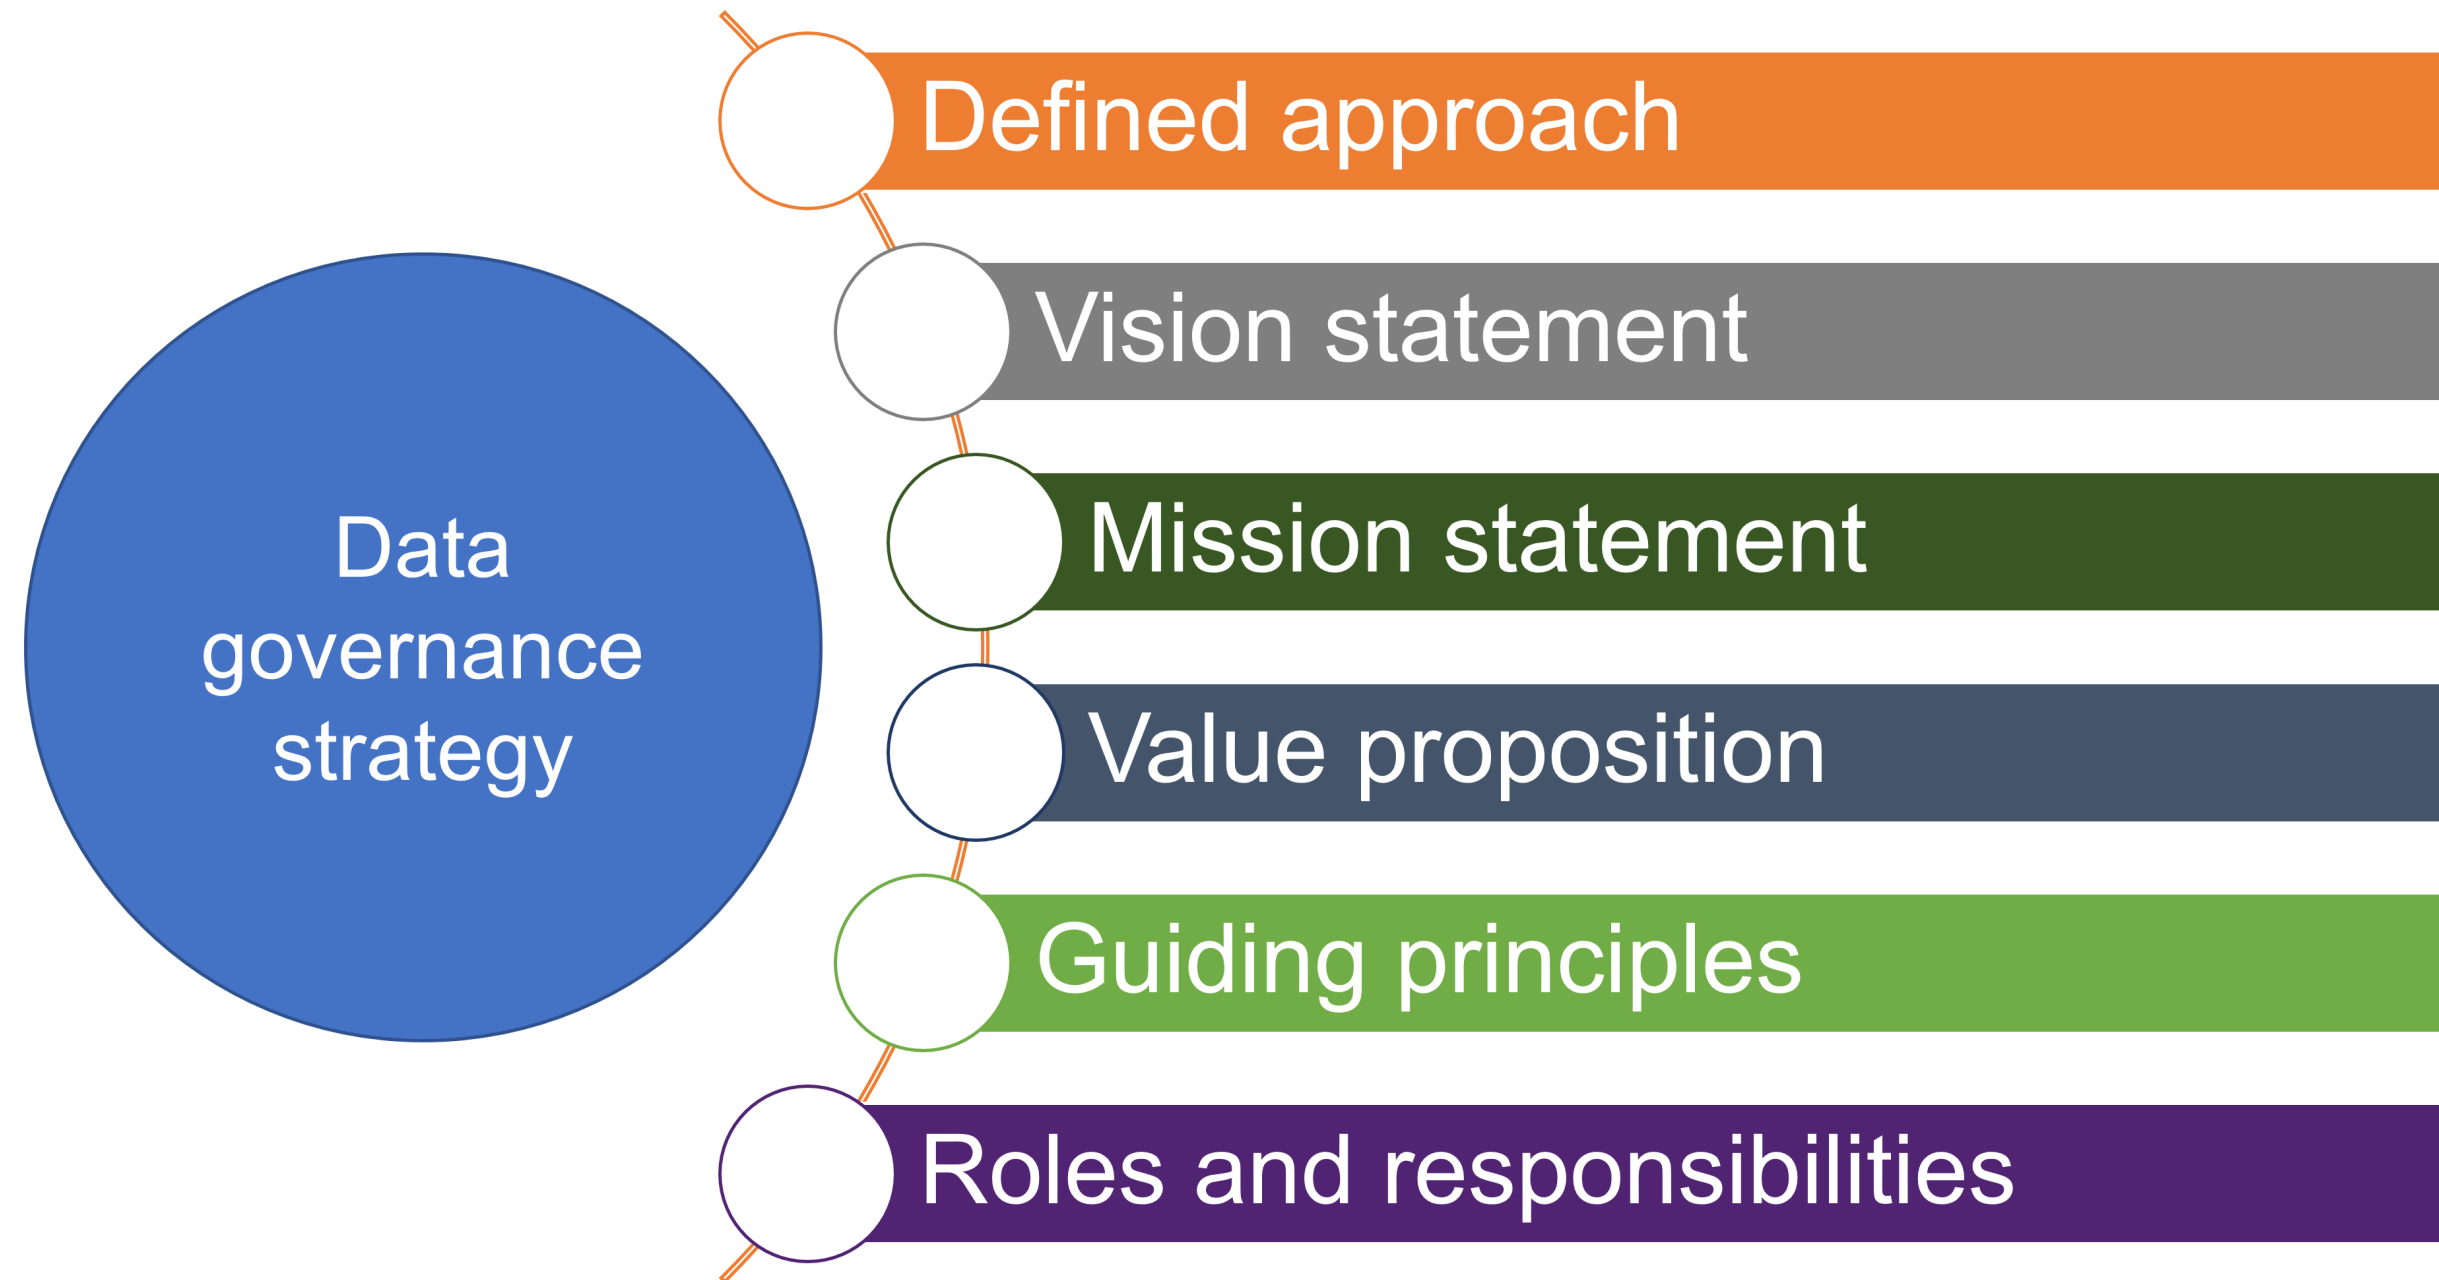

# Creating a data governance strategy

DATA GOVERNANCE CONCEPTS

**Courtney Smith**  
Strategic Initiatives Manager

# Strategy components

# Defined approach

# The vision statement

- Inspiring and compelling
- Must be easily understood
- Drives alignment towards data objectives

**Example:** Revolutionize how patients leverage their data to make informed healthcare decisions.

# Mission statement

- Call to action
- Guidance toward achieving objectives
- Ties with the vision statement
- Should include organization's goal

**Example:** Enable patients to make data-driven decisions about their healthcare by providing them with secured access to accurate, trusted data and insights.

# Value proposition

- Top benefits of implementing the program
- Cause and effect statement
- Helps convince others of the importance

## Example:

By implementing this data governance program, we will realize:

- More accurate data for actionable insights
- Better compliance with privacy regulations
- Increased trust in data for decision-making

# Guiding principles

- Define how data should be used, managed, and treated
- Typically focus on meeting business goals while minimizing risk

## Examples:

- Data owners and stewards will be assigned to ensure accountability.
- Data stakeholders must be transparent in all decision-making.

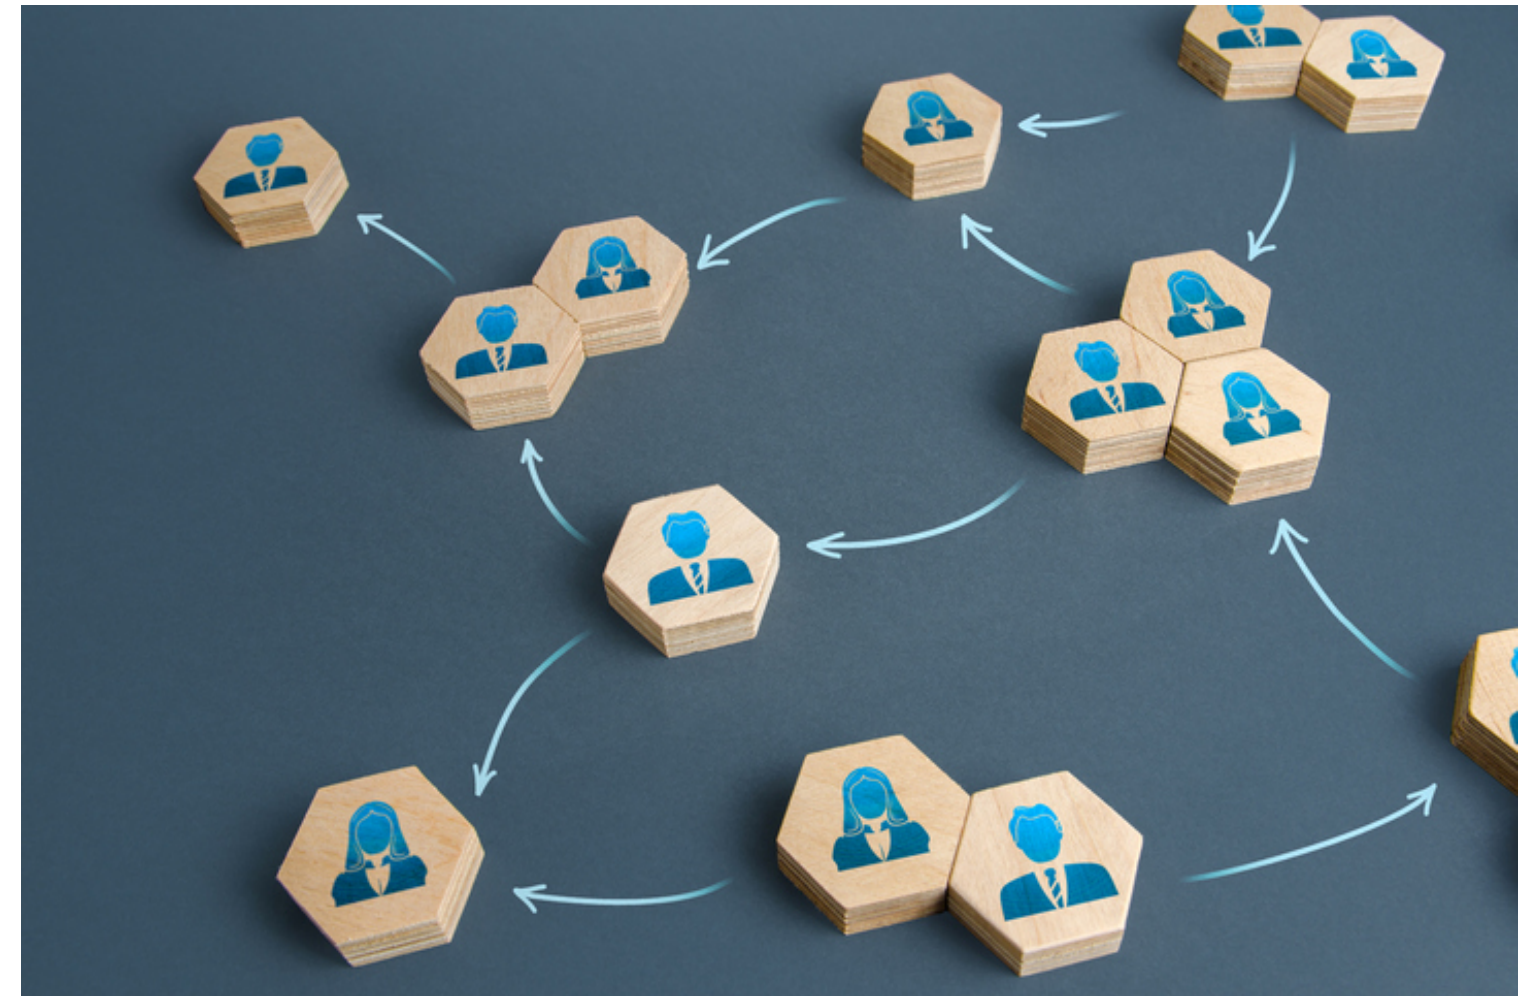

# Roles and responsibilities

- Align with operating model and framework
- Establish role of the data governance office
- Set expectations of business lines
- Indicate how compliance will be measured

## Example:

- Hire CDO and establish data governance office as single enforcement authority
- Businesses must follow policies and standards
- Measured by monthly data health checks

**Let's practice!**  
**DATA GOVERNANCE CONCEPTS**

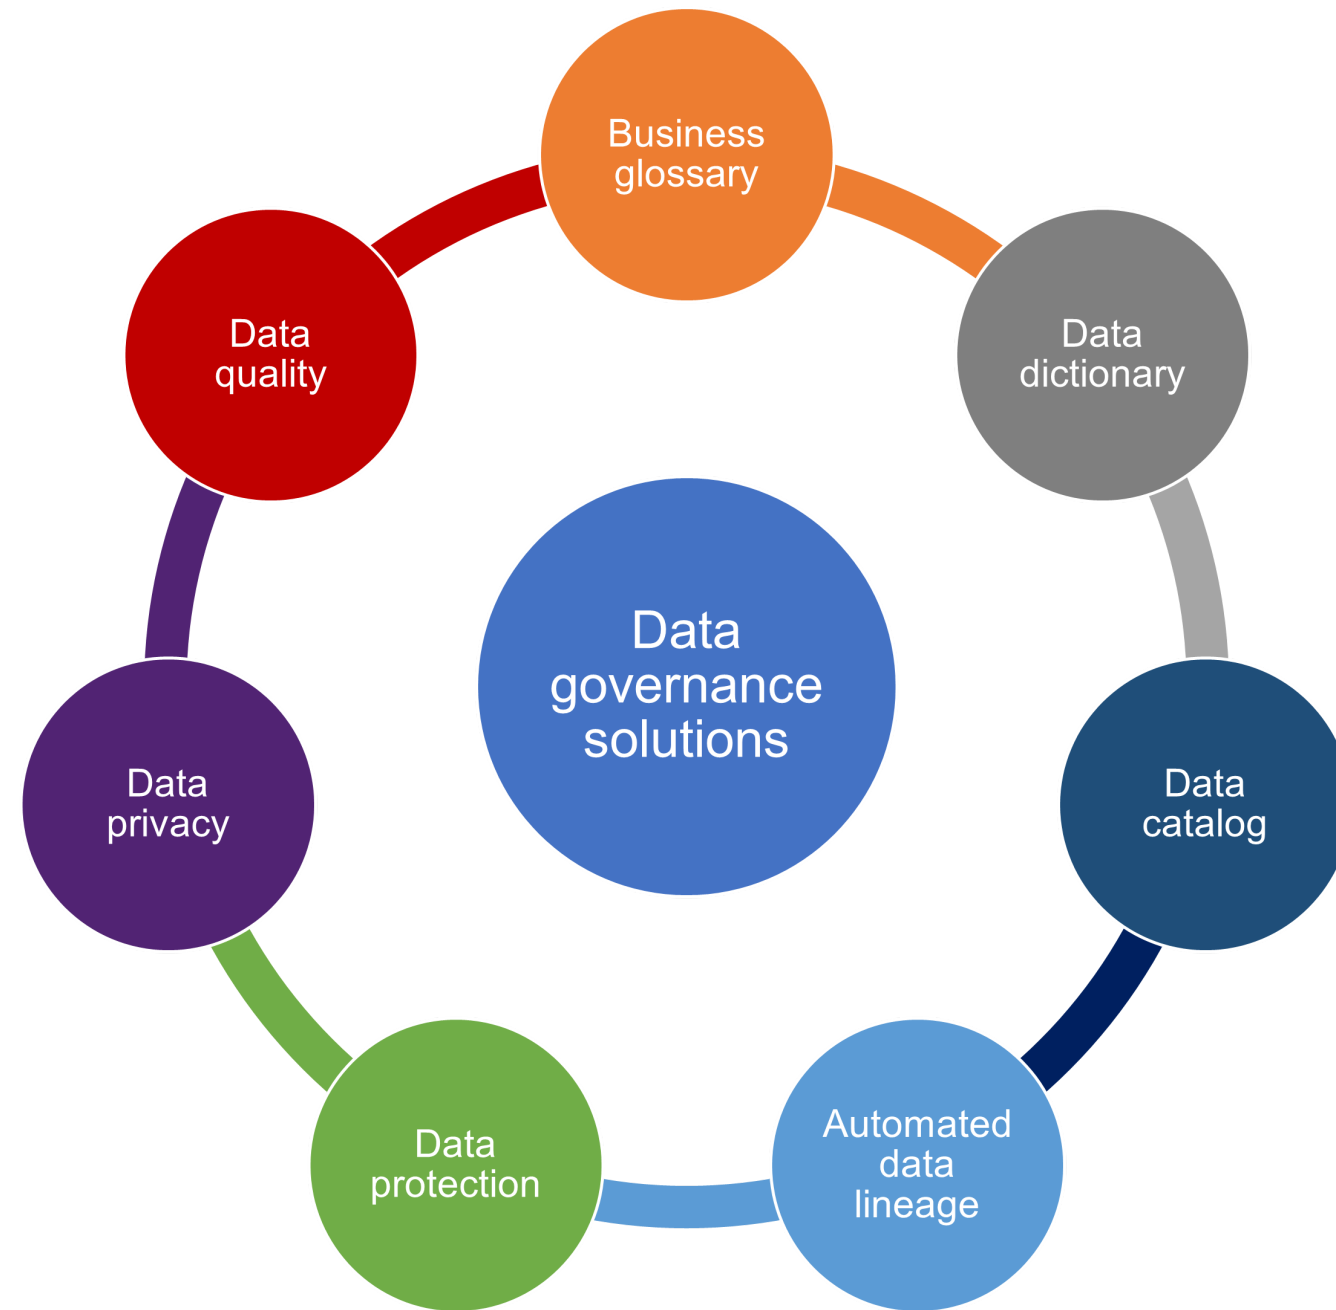

# Enabling data governance with technology

DATA GOVERNANCE CONCEPTS

**Courtney Smith**  
Strategic Initiatives Manager

# Data governance solutions

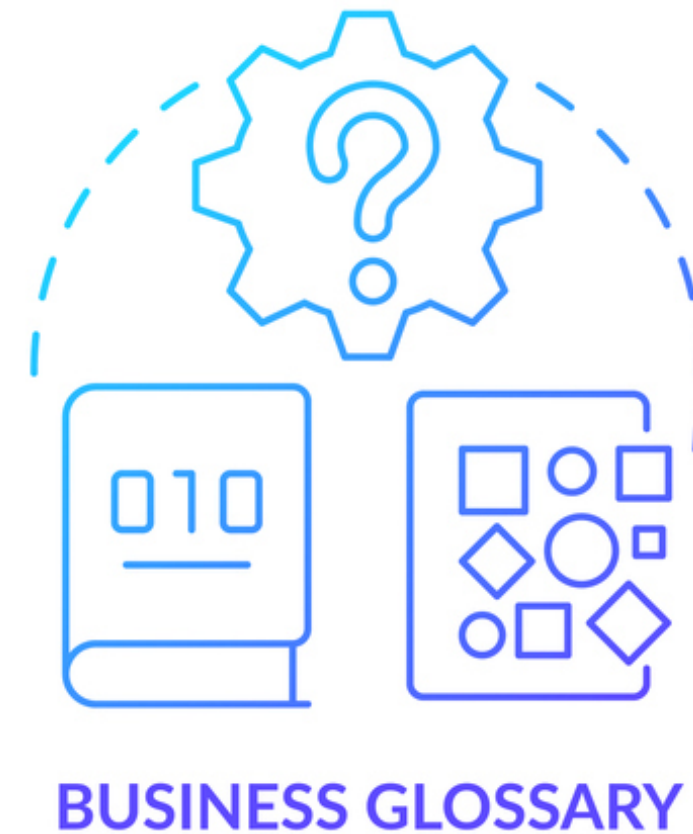

# Business glossary

- Standard descriptions and definitions
- For business terms
- Creates common vocabulary

## Example for Social Security number:

- Unique identifier assigned by the U.S. government to citizens
- Used for taxes, credit reporting, and health-related purposes

**BUSINESS GLOSSARY**

# Data dictionary

- Technical information
- Usage, values, location, relationships
- Promotes consistency, transparency

## Example for Social Security number:

- Must be in a nine-digit format, separated by hyphens, i.e., XXX-XX-XXXX.
- Stored in the "customer\_attribute" table under the "social\_sec\_number" column.

# Data catalog

- Metadata management tool
- Organized inventory of data
- Enables easy, quick location of data
- Improves efficiency and transparency
- Automated workflows for data sharing, leading to better collaboration
- Similar to being able to search a library

# Automated data lineage

Lineage:

- Describes how data flows from origination to consumption, including transformation
- Time-consuming to manually document
- New capabilities to auto-extract and maintain
- Increases trust, accuracy and validity of data

# Data protection, privacy, and quality

## Data protection:

- Data access capabilities

## Data privacy management:

- Data classification and regulation tagging

## Data quality management:

- Rule writing
- Data health metrics
- Exception reporting

# Choosing a solution

- Understand the primary users
- Basic or advanced capabilities
- Prevent issues with integration
- Popular data management platforms:
  - Collibra
  - Atlan
  - Informatica
  - IBM

**Let's practice!**  
**DATA GOVERNANCE CONCEPTS**

# Developing a roadmap

DATA GOVERNANCE CONCEPTS

**Courtney Smith**  
Strategic Initiatives Manager

# Roadmap planning

- Obtain buy-in
- Build the team
- Create documentation
- Communicate and train
- Measure success
- Choose new solutions

# Obtain buy-in

- Secure the executive sponsor
  - Must be influential senior leader
- Ask for help with soliciting committee members
- Include a diverse group of stakeholders that can help drive organizational buy-in

# Build the team

- Hire the expert - a CDO
- Build data governance office
- Establish role of data governance office - enforcement authority or facilitator

# Create documentation

- Robust policies, standards, procedures
- Make sure to update regularly
- Ensure requirements are reasonable and can be met
- Measure and enforce compliance

# Communicate and train

- Provide regular updates
- Schedule share-outs
- Keep company engaged and excited
- Promote data literacy and offer training
- Leverage articles, vendors, and communities of best practice

# Measure success

- Establish what success looks like
- Establish objectives and KPIs

## Example:

- Increase data quality by 30% over the next six months.
- Use measurements to keep stakeholders aware of progress

# Choose new solutions

- Identify your solution
- Build time in roadmap for testing, implementation, training
- Use change management processes

**Make sure to revisit your roadmap throughout your data governance journey!**

**Let's practice!**  
**DATA GOVERNANCE CONCEPTS**

# Congratulations!
